1.	The police station in Soviet use; an NKYD (the Vokovic	e area, Prague 19,	is being prepare	d for

- reasons an unspecified number of Czech police have been assigned as laborers and assistants to the Soviet technicians engaged in altering the buildings.
- 2. Pre-military medical processing has been received by 130 youths ranging in age from 12 to 17 years, from the Kladno area. This is considered unusual as the youths had been recruited for work in mines, and diversion of personnel from the critical mining area is not in line with current Czech practice. The youths are to have parachute training.
- Comment: This is probably connected with the current program of Svazarm 50X1-HUM (Association for Cooperation with the Armed Forces).
